

Unlock your skin's potential with Fotona laser treatments

The New Year is an opportunity to start afresh, and where better to start than with some self-care and attention

Let 2021 be the year to get your face and body into the best shape they can be. Laser treatments enhance the skin in ways that topical treatments and injectables can't.

Fotona is best known for its patented 4D non-surgical 'facelift', enjoyed by many celebrities. Fotona's patented laser technology enables safe penetration of laser energy, stimulating collagen without damaging the skin. This makes Fotona stand out from the crowd in so many areas of skin transformation. As well as treating the signs of ageing, Fotona lasers can treat pigmentation, acne, rosacea, scarring, birth marks, love handles, back fat, stretch marks and much more.

Dr Tanja, a key opinion leader in Fotona treatments, combines the science of laser with the art of tailoring treatments to the

individual's needs, for which she's now internationally recognised. Dr Tanja uses Fotona lasers for their versatility, reliability, safety and outstanding results with no downtime for the majority of treatments. Dr Tanja and Fotona have individually been recognised for their achievements, and are delighted to be finalists in the Aesthetic Awards 2020, recognising excellence in the industry.

DR TANJA'S TOP 6 'GO TO' FOTONA TREATMENTS

FRESHEN UP THE EYES

SmoothEye® laser lift helps reduce puffiness, brightens, lifts and smooths the appearance of fine lines around the eyes. The treatment stimulates collagen, tightening existing fibres and stimulating fresh collagen production, giving firmer, smoother skin.

A NON-SURGICAL LASER 'FACELIFT'

Fotona 4D™ laser treatment works inside the mouth as well as outside, stimulating collagen from the superficial to the deeper layers, giving that much-wanted lift to the lower-face and jawline area. Results are due to tightening existing collagen fibres and stimulating new collagen, as well as reducing pigmentation and encouraging cell turnover. Giving an instant glow and tightness, the more impressive results appear over time as new collagen is formed. Dr Tanja has developed this technique further to a bespoke 6D treatment for those that would like a little extra enhancement to their skin.

TREAT ACNE AND ROSACEA

Dr Tanja uses a combined approach of a skincare regime and bespoke Fotona laser protocols in a layering of treatments to combat all the aspects of these conditions. Results can be life-changing, with individuals finding renewed confidence after treatment.

REMOVE PIGMENTATION AND EVEN SKIN TONE

8 weeks after 3rd trea...

Starwalker Fotona laser. Within one to two sessions, pigmented areas are removed with no damage to the skin. The pigment is lifted away leaving fresh skin cells and a clear complexion.

FAT REDUCTION AND SKIN TIGHTENING

TightSculpting™ is the name given to this treatment, which melts the fat away and tightens

the skin. This painless treatment works by denaturing fat cells with heat, followed by tightening the skin with collagen stimulation. What better way to get rid of those stubborn areas that don't seem to budge.

REMOVAL SKIN LESIONS

Remove benign skin lesions with no evidence. Even better, no needles or stitches are required.
